

## Granite Effect Flooring System

- Seamless Granite Effect
- Solvent Free
- Self Levelling

Another innovative decorative system for the domestic, commercial and industrial markets.

### What Makes It Special?

As well as being a superb decorative finish this system has been designed with the contractor in mind:

The star of this system is our EP 370. The granite effect is created by aggregate that is already incorporated into the epoxy – just mix part A with part B and apply.

The unique blend of chemicals ensure that the aggregate is not coloured by the epoxy but is suspended in it, showing through and giving the required granite effect.

The superior self levelling properties makes it supremely easy to achieve that smooth, almost polished look.

### Ideal Uses for This System

- *Kitchens, bathrooms and conservatories*
- *Showrooms*
- *Offices*
- *Shops*
- *Light Industrial Units*

### Colour Options
