

METALLIC EFFECTS

luxury stuccos for interiors

FULL FINISH METALLIC EFFECTS

The **metallic effects system** allows you to create spectacular interior finishes. These products are at home in the most sophisticated modern setting, as well as in more classical architecture styles.

The **metallic effects system** unlocks the creativity of designers and contractors to express themselves freely, playing with lights and shadows, shine and gloss, colours and textures. These are only few examples of an endless list of possible combinations.

The metallic effects system has three components

- application of the key-coat **rialto zip** by roller to promote adhesion.
- application of the basecoat **rialto evolution**, two coats by trowel and one by spatula
- application of **rialto stucco oro/argento/bronzo/ottone** by spatula and final polishing by soft cloth.

Veiled metallic effects

In addition to the full finish effects show on the previous pages, the **metallic effects system** can produce a more subtle “veiled effect” by using contrasting colours of the **rialto evolution** undercoats. This veiled effect gives a luminescent and delicate effect to walls and ceilings.

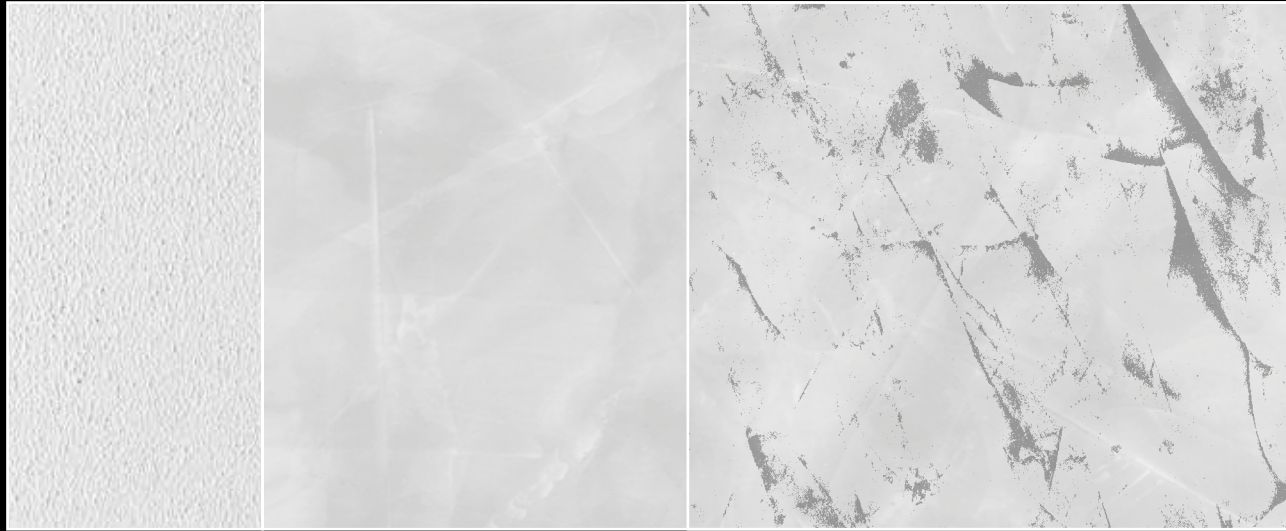

Caution. Due the method of application, tools and method of polishing colours may vary in depth and brightness. These pictures only approximate the colour of real spatula work.

THE SYSTEM

rialto zip

a quarz-acrilic primer to promote the adhesion of the plaster, average coverage 6-8 sqm/l (65-86 sqf/l), one coat application.

Available in 4l and 14l containers.

rialto evolution

an acrylic plaster basecoat to create the spatula look and the perfect substrate for the final application, average coverage 0.7-0.9 Kg/sqm (1.28-1.68 lb/sq.yd) three coats application.

Available in 10 kg containers.

Metallic stucco, average coverage 15-20 gr/sqm (0.3-0.6 oz/sq.yd).

Available in 375 gr tints and in the following colours:

rialto stucco oro (gold)

rialto stucco argento (silver)

rialto stucco bronzo (bronze)

rialto stucco ottone (brass)

Each of these premium metallic finishes is based on parafin, metallic particles, and rheology agents to ensure ease of application.

For further information regarding the products mentioned in the text, see the following technical data sheets.
